Brookhaven<br>scientists are conducting basic electrochemical research<br>to significantly improve the efficiency and reliability of fuel<br>cells and batteries. They have launched a concerted effort<br>of basic and applied research for the development of<br>improved energy-storage materials and systems with high<br>energy densities, fast cycling rates and long cycling<br>lifetimes in efficient, economical and safe media.<br>Characterization facilities at NSLS-II & CFN provide an<br>understanding of the structural and functional properties of<br>energy materials, under<br>operating conditions to help us design better battery<br>materials. | <ul> <li>National Synchrotron Light<br/>Source-II (NSLS- II)</li> <li>Center for Functional<br/>Nanomaterials (CFN)</li> <li>Long Island Solar Farm</li> </ul>  |

| Case Western<br>Reserve<br>University<br>Cleveland, Ohio   | Offshore Wind Foundation:<br>Research, design, testing, and<br>performance monitoring<br>Contact: Prof. Xiangwu (David)<br>Zeng xxz16@case.edu   | The Research Group of Prof. Zeng in the Department of<br>Civil Engineering at Case Western Reserve University has<br>been conducting research on offshore wind foundation in<br>the past ten years. They have one patent and published<br>more than 30 papers on the static, dynamics, and<br>earthquake response of a wide range of types of offshore<br>wind foundations. They do geotechnical tests to determine<br>soil properties for foundation design. They can do 1g tests,<br>small scale centrifuge tests, engineering calculations and<br>numerical simulations. | <ul> <li>Geotechnical centrifuge</li> <li>Geotechnical lab testing<br/>facilities</li> <li>Large scale structure testing<br/>facility</li> <li>Numerical simulation software</li> </ul>  |
